

# Supplement – instructions for GR 300

Thank you for purchasing the latest and largest Green Room model, the GR 300.

Construction of the Green Room GR 300 is similar to the GR 240, but for additional strength there are two ceiling cross-members, a floor cross-member and a centre upright as shown in the diagram below. The brackets are also different to accommodate the extra poles – *see diagram and parts list*.

Please note that the 3-way bracket at the bottom of the centre upright is different from the others – it is smaller, and it is drilled differently so it is essential to use the correct bracket – *see photograph*.

3-way brackets – standard (above) and small (below)

5-way centre bracket

## GR 300
